eConnect™

Look in on your compressor system from anywhere in the world.

SULLAIR®

With Sullair's new eConnect™ remote monitoring system, all you need is a computer and web browser to view the health of your compressed air system from anywhere in the world!
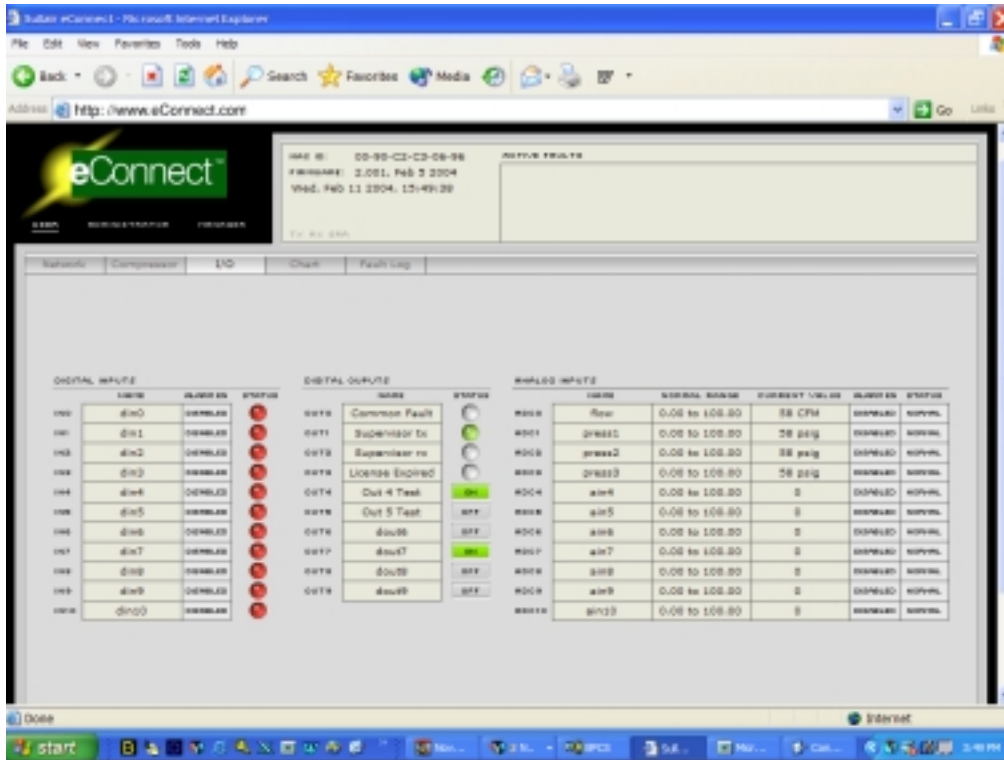

eConnect™ is an outstanding tool for remotely diagnosing the health of your compressed air equipment. The status of your entire air system can be viewed at a glance.
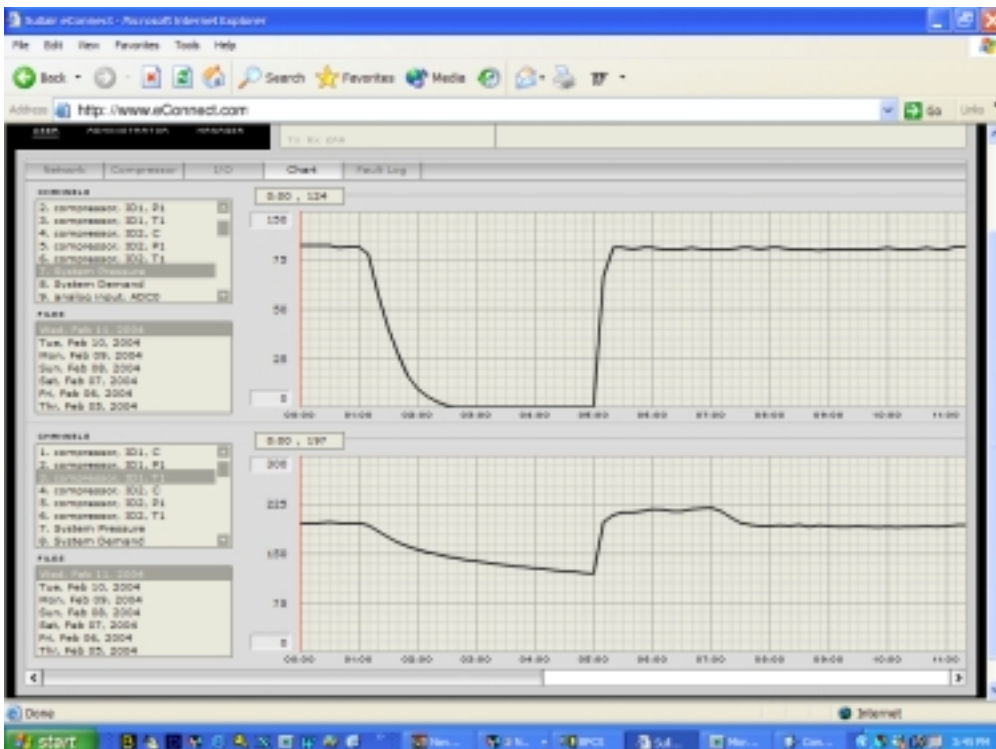

- eConnect™ is a state-of-the art processor with embedded firmware capable of showing all Sullair Supervisor parameters.

- The eConnect™ hardware has provision to:
  – monitor multiple compressed air system parameters through an Ethernet connection
  – both local area networks (LAN) and the Internet are available

- For each compressor, service indication at a glance is displayed for maintenance information such as:
  – last filter change
  – separator and oil change
  – next scheduled service is due—or past due—for each air compressor

- Password access allows you to remotely adjust parameters such as:
  – load deltas
  – drain intervals
  – recovery time
  – and more

- Up to 30 different parameters can be viewed and logged such as:
  ① all of the pressures
  ② temperatures
  ③ lifetime and loaded hours
  ④ output status

manages all your vital statistics.

- Up to 16 compressors can be monitored at once.

- Monitors up to 11 external analog and 11 digital inputs.

- 7 days worth of data is available on-line.

- Visual indication given on each screen.

- On-line system fault log with flashing indication.

- Configured to send an email to up to 4 addresses when a fault occurs.

- eConnect™ hardware connects easily to the Supervisor Controller or Supervisor II through RS485 communication channel.

- Compressor and external I/O faults are displayed.

- Just three wires networks one box with machines

- Several different levels of additional reporting and graphing services are available.

  It's as simple as that!

Features

WEB-BASED	🟢	YES. A web browser is all you need.
CONNECT BY MODEM	🟢	YES. Use dial–up or DSL to access.
CONNECT BY SATELLITE BOUNCE	🟢	YES. Can be accessed via satellite
CONNECT BY LAN	🟢	YES. Use Local Areas Network.
VERSATILE	🟢	YES. Provides information
EASY TO INSTALL	🟢	YES. Only 3 wires required.
INEXPENSIVE	🟢	YES.
BUILT–IN SECURITY	🟢	YES. Access only by password.
24/7 COMPRESSOR MONITORING	🟢	YES. eConnect is ready when you are.
ADDITIONAL SOFTWARE REQUIRED	🔴	NO. You need only your browser software.

Please note: additional customer supplied hardware may be required to connect via modem or satellite.
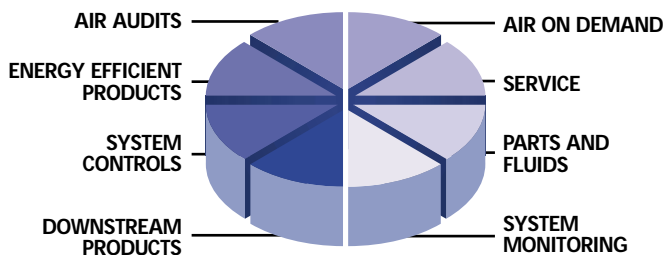

Options

Additional services take advantage of eConnect's data logging capabilities with 30 separate channels being collected.

Data is routed to a central database where system summary reports can be generated showing demand, pressure, energy cost, fault log, operating log, and maintenance detail.

Reports can be automatically delivered or constructed on demand in an easy to read PDF format complete with graphing.
